Experiment 6

Designing a Bus Booking Interface Using RAD Approach

OBJECTIVE:

To understand how user interfaces are developed using the Rapid Application Development (RAD) model and to build a simple working prototype for a bus ticket booking system.

OVERVIEW:

The Bus Booking System is created to make ticket booking easier through an online platform. It allows users to find buses, select seats, and complete payments in a simple way.

The development follows the RAD model, which focuses on fast design and continuous updates. Using Axure RP, different UI stages like planning, designing layouts, and building prototypes were completed.

This project demonstrates a complete booking process in a user-friendly manner.

STAGE 1: Planning Requirements

At this stage, the main needs of the application were identified.

User Expectations:

- Quick selection of travel locations
- Easy access to available buses
- Clear pricing and booking process **Important Features:**
- Input fields for source and destination
- Option to select travel date
- List of buses with timing and cost
- Visual seat arrangement
- Form to enter passenger details
- Multiple payment methods

- Access to booking records

STAGE 2: Interface Design

The requirements were converted into basic screen layouts using Axure RP.

Screen Layouts:

- **Main Page:** Input for travel details and search option
- **Bus Results Page:** Shows available buses with timing and price
- **Seat Selection Page:** Displays available and booked seats
- **Details Page:** Collects passenger information

User Actions & Flow:

- Clicking search shows available buses
- Navigation buttons help move between screens
- Booking confirmation appears after final step

Common Design Elements:

- Same header used on all screens
- Uniform buttons and design style

STAGE 3: Prototype Development

In this step, the design was turned into an interactive model.

Functional Elements:

- Panels used to update content dynamically
- Seats can be selected or removed by clicking
- Payment options selected using buttons

Testing:

- Entire booking process was tested step by step

- Minor improvements made for better usability

STAGE 4: Final Setup

This stage prepares the project for sharing or use.

Deployment:

- Uploaded to Axure Cloud
- Shareable link created **User Guide:**
- Explains how to book tickets step by step **Design Details:** ▯ Main

Color: Blue ▯ Fonts:

- Titles – Serif
- Content – Sans-serif

OUTCOME:

The bus booking prototype was successfully created.
Using the RAD approach helped in faster development and continuous improvements. The final design is simple, clear, and covers the complete booking process.
