TASK ANALYSIS ONLINE SHOPPING APP

Task Analysis is the process of breaking down how users interact with an online shopping application into smaller steps. It helps in understanding user behavior, identifying issues, and improving usability.

KEY ASPECTS OF TASK ANALYSIS

1. Understanding tasks users perform (searching, selecting, purchasing products).

2. Identifying the sequence of actions required to complete a purchase.

3. Analysing user pain points such as payment failures or navigation issues.

4. Defining system requirements to improve user experience and efficiency.

USER FLOW- ONLINE SHOPPING APP

User Flow is a visual representation of how users navigate through the shopping application to complete a purchase. It shows steps from browsing products to order confirmation or return.

USER FLOW FOR ONLINE SHOPPING APP

Start → Open App → Login/Register → Browse/Search Products → View Product Details → Add to Cart → View Cart → Apply Filters/Offers → Enter Address → Choose Payment Method → Make Payment → Order Confirmation → Track Order / Return
